

A shared measure of how young people follow Jesus.

One short, anonymous survey any ministry can run. Its own results the moment people answer. A Collab-wide picture no single ministry could see alone.

jfindx.org

Thirty-plus ministries, each measuring differently — so no one can see the whole.

The problem

Every ministry asks its own questions, in its own way. Numbers can't be compared, and the most important question — where do young people stop moving? — goes unanswered.

The answer

One instrument, the same everywhere, translatable, that any ministry can run in minutes on any phone — even offline, at a camp.

What changes

A youth pastor sees where their people stall. The Collab sees patterns across countries. A facilitator helps turn a score into a changed strategy.

Three questions. Four tiers. Twelve cells.

Every question belongs to one question — **Follow** (personal faith), **Mission** (outward), **World** (lived impact) — and one tier — **Exposure** → **Response** → **Formation** → **Multiplication**. Read across a row to see where people stop moving; read down a column to compare the three.

	EXPOSURE	RESPONSE	FORMATION	MULTIPLICATION
Follow personal faith	heard of Jesus	believes	being shaped	helps others believe
Mission outward	aware of the call	convinced it's theirs	practising witness	mobilising others
World lived impact	sees faith should matter	believes it does	choices reshaped	changing their spheres

Seven minutes, on any phone — with no signal if need be.

Scan or tap

A QR code on a poster, or a link in a group chat.

Choose a language

Every word is translatable; the survey runs in the respondent's language.

One question per screen

About 7 minutes; a 3-minute short version exists for camps.

Anonymous, and told so

No names or emails; age is a band. They're told only grouped results are ever seen.

Offline-proof

Answers are kept on the phone and sent automatically when signal returns.

Next person

At a camp, one phone can be passed along — each person's answers clear from the screen.

Your own dashboard — and the Collab's, side by side.

Two tabs, identical in shape

Your organisation's dashboard and Collab Intelligence: the same three figures, the same J12 matrix and heat map, in the same places.

Rooms

Every link is its own room — a camp, a partner, a youth night — with its own results, rolling up into your whole organisation.

Overlay the Collab

Put the Collab's pooled figure in the corner of every cell and see where you sit. Whole-organisation only, never a single room.

A heat map that doesn't overclaim

Countries light up only once 2,000 people there have answered. Until then they stay grey — honestly.

“What does this mean?”

Ask a Collab facilitator about exactly the view you're looking at. That's the consulting layer: from a score to a strategy.

The promises the platform keeps.

Of those who completed it

Results describe the people who answered — never a whole population.

Nothing that points at a person

No score under 10 people. No country on the map under 2,000.

Aggregates only

No organisation sees an individual answer — not even its own young people's.

Minors protected at the edge

Consent — including parental consent — is handled by each ministry.
Nothing identifiable about under-18s is ever held centrally.

Your brand, not ours

Respondents see your name, colour and logo.

Never locked

Questions are researcher-owned and versioned; every answer stays tied to its version.

Run the demo — part one: set up.

Before you start

Have a laptop to present from and a phone to answer on. For a no-risk walkthrough with invented figures, open jfindx.org/tour.

1 · Sign in

On the laptop go to jfindx.org → “Sign in to Your Organisation”. Enter your ministry email. Open the link from the newest email — it works on any device.

2 · Your dashboard

You land on your organisation's dashboard. Point out the three figures and the J12 matrix. Say: the dashes mean there aren't enough answers yet — that's the privacy floor at work.

3 · Make a room

Click “+ New link”. Name it after your audience (“Demo room”), choose Public, set it to open now and close tomorrow, and save.

4 · Show the QR

On the new card click “QR” and hold it up. Invite people to scan it with their phones.

Run the demo — part two: answer, read, ask.

5 · Answer on a phone

Scan the QR. Point out the organisation's own colour and name, the one-question-per-screen flow, and the anonymity promise. For effect, switch the phone to airplane mode halfway — it keeps working.

6 · Watch it arrive

Back on the laptop, reload the dashboard. The room's count goes up. Explain that a score appears once 10 people have answered, so a real room fills in live.

7 · Switch views

Toggle between the J12 matrix and the heat map; open the Collab Intelligence tab to show the pooled picture has exactly the same shape.

8 · Ask what it means

Click “What does this mean?” and pick a suggested question. It goes to a Collab facilitator with the view attached — that's where a score becomes a strategy.

9 · Hand over

In “Share about the JFINDX” download this guide, the two-pager and the QR code for anyone who wants to take it further.
