The *Jesus* Index
a global measure of Jesus-following

PITCH AND DEMO GUIDE · FOR LEADERS, BOARDS AND PARTNERS

A shared measure of how young people follow Jesus.

One short, anonymous survey any ministry can run, free. Its own results live, as people answer. A Collab-wide picture no single ministry could see alone.

jfindx.org

WHY IT EXISTS

Thirty-plus ministries, each measuring differently — so no one can see the whole.

The problem

Every ministry asks its own questions, in its own way. Numbers can't be compared, and the most important question — where do young people stop moving? — goes unanswered.

The answer

One instrument, the same everywhere, translatable, that any ministry can run in minutes on any phone — even offline, at a camp.

What changes

A youth pastor sees where their people stall. The Collab sees patterns across countries. A facilitator helps turn a score into a changed strategy.

THE MODEL · THE J12

Three questions. Four tiers. Twelve cells.

Every question belongs to one question — **Follow** (personal faith), **Mission** (outward), **World** (lived impact) — and one tier — **Exposure** → **Response** → **Formation** → **Multiplication**. Read across a row to see where people stop moving; read down a column to compare the three.

	EXPOSURE	RESPONSE	FORMATION	MULTIPLICATION
Follow personal faith	heard of Jesus	believes in Jesus	being shaped	helps others believe
Mission outward	aware of the call	convinced it's theirs	practising witness	mobilising others
World lived impact	sees faith should matter	believes faith matters	choices reshaped	changing their spheres

THE RESPONDENT

About six minutes, on any phone — with no signal if need be.

Scan or tap

A QR code on a poster, or a link in a group chat. Your welcome first, your thank-you last.

Choose a language

English today, Spanish in review and more on the way — every word is translatable.

One question per screen

The J12 in about 5 minutes, the Full survey in about 8. Country from a list; no city, no free text.

Anonymous, and told so

No names, emails or birthdays; age is a band. They're told only grouped results are ever seen.

Offline-proof

Answers are kept on the phone and sent automatically when signal returns.

Every path counts

Those not yet following Jesus answer their own questions — counted, and scored apart.

THE MINISTRY

Your own dashboard — and the Collab's, side by side.

Two tabs, identical in shape

Your organisation's dashboard and Collab Intelligence: the same figures, the same J12 matrix and heat map, in the same places.

One survey per group

Every survey you start — a camp, a partner, a youth night — has its own results, adding up into your whole organisation.

Yours to arrange

“Edit your dashboard” lets your admin choose which views and tools your team sees. A score never loses its sample size.

A map that doesn't overclaim

Countries light up only once 2,000 people there have answered; cities and areas at 400. Until then they stay grey — honestly.

“What does this mean?”

Ask a Collab facilitator about exactly the view you're looking at. That's the consulting layer: from a score to a strategy.

PRIVACY AND HONESTY

The promises the platform keeps.

Of those who completed it

Results describe the people who answered — never a whole population. Every score shows its n.

Nothing that points at a person

No score under 10 people. No city under 400, no country under 2,000.

Aggregates only

No organisation sees an individual answer — not even its own young people's.

Minors protected at the edge

Consent is confirmed twice — for the organisation and for each survey — and parental consent is held by each ministry, never by the Index.

Kept only as long as needed

Identifying details removed after 60 days; cleaned answers kept up to 5 years. IPs never stored with answers.

Never locked

Questions are researcher-owned and versioned; every answer stays tied to its version.

DEMO INSTRUCTIONS · ABOUT 10 MINUTES

Run the demo — part one: set up.

Before you start	Have a laptop to present from and a phone to answer on. For a no-risk walkthrough with invented figures, open jfindx.org/see-a-demo.
1 · Sign in	On the laptop go to jfindx.org → “Sign in”. Enter your ministry email and open the link from the newest email — it works on any device.
2 · Your dashboard	Point out the figures and the J12 matrix. Say: the dashes mean there aren't enough answers yet — that's the privacy floor at work.
3 · Start a test survey	Click “+ Start a new survey”. Name it (“Demo”), tick Test link, choose J12 or Full survey (open “What each survey measures”), add a welcome, and save.
4 · Show the QR	On the new card click “QR” and hold it up. A test link works before consent and its answers are kept apart and deleted after 7 days.

DEMO INSTRUCTIONS · CONTINUED

Run the demo — part two: answer, read, ask.

5 · Answer on a phone	Scan the QR. Point out your own colour, name and welcome, one question per screen, and the anonymity promise. For effect, switch to airplane mode halfway — it keeps working.
6 · Watch it arrive	Back on the laptop, reload. The test card's count goes up — test answers never reach a score. On a real survey a score appears once 10 people have answered.
7 · Switch views	Toggle the J12 matrix, Unengaged matrix and heat map; open “Edit your dashboard” to show how a team chooses what it sees; open Collab Intelligence for the pooled picture.
8 · Ask what it means	Click “What does this mean?” and pick a suggested question. It goes to a Collab facilitator with the view attached — that's where a score becomes a strategy.
9 · Hand over	At the bottom of the dashboard, “Share about the Jesus Index” has this guide, the two-pager and the QR code. Consent materials: jfindx.org/resources/consent.
